

# POULTICE For Stain Removal

Stain-Proof® Alkaline Cleaner (*formally known as Oxy-Klenza™*) can be mixed into a paste with a little water and used to create a poultice to hold the cleaning agent in prolonged contact with the affected area to draw out and remove deep stains from countertops.

## ALKALINE CLEANER POINTS OF DIFFERENCE

- Oxygen cleaner plus 4 other key ingredients
- 100% powder concentrate - 36 oz.
- Inexpensive base
- Quickly breaks down into naturally occurring minerals and oxygen

## SUPPLIES NEEDED

Remove stains from countertops for less than \$1 in material.

### PREVIOUS PACKAGING

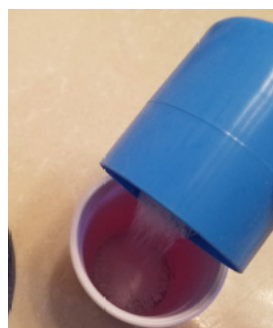

## POULTICE MIXING & APPLICATION INSTRUCTIONS

**1.** Place Alkaline Cleaner powder into a plastic bag and crush it into a fine powder by rolling the product container repeatedly over it. **2.** Mix powder with water or other liquid to make a paste (on average, 1 scoop of powder mixed with ½ scoop of clean water or other liquid will yield 1 scoop of poultice). Mix should be dry but moist enough to create a paste (the consistency of peanut butter). **3.** Place approximately ¼” thick poultice over stain, extending it ½” past the visible stain. **4.** Place a damp paper towel on top of poultice, then cover both with a plastic bag, fixing all sides with painter’s tape until airtight. **5.** Remove after 24 hours. **6.** Repeat if necessary. Many stains will come out on the first try, but some stains will require 2-3 poultices.

Crush Alkaline Cleaner into a fine powder

Mix powder with water or other liquid to make a paste

Place approximately ¼” thick poultice over stain

Place damp paper towel, cover & tape air tight

Remove after 24 hours, repeat process for harder stains

# POULTICE MIXING GUIDE

STAIN	TYPE	MIX POULTICE STAIN-PROOF® Alkaline Cleaner (formerly known as Oxy-Klenza™)
Acne Medicine	Solvent	Water
Adhesive	Solvent	Acetone
Blood	Organic	Ammonia
Body Fluids	Organic	Water, Stain-Proof® Daily Floor Cleaner 50% & 50% Water
Candy	Solvent	Acetone
Chocolate	Organic	Ammonia
Coffee/Tea	Organic	Water
