

The clear non-slip coating for the floors you already have.

A dual-component, water-based polyurethane coating that makes existing surfaces slip-resistant, without changing what they are. Used across hospitality, healthcare, public infrastructure and homes.

A certified installer laying down Stellmann Non-Slip Clear in a residential bathroom. Clean, prime, one coat, done.

Certified, at every rating

Independently certified by CSIRO in wet conditions, with a choice of P3 Soft, P3, P4 or P5. In Europe: R11 (tested by Analytice) and R13 (tested by LGA Bautechnik), with Class B and Class C barefoot classifications on file.

Clear and UV-resistant

A clear, UV-resistant finish that puts safety and design side by side. Outstanding adhesion to tiles, ceramics, marble, natural stone, epoxy, PU, fibre glass, steel, vinyl and glass, supplied with Stellmann Clear Primer.

Easy to apply

Low VOC and non-toxic, engineered for a flawless non-slip finish without roller marks. Applied by roller or spray, always drying to the same satin finish.

One coating. Four ratings.

P3_{Soft}

EASY CLEAN

Interior stairs, living areas, hotel lobbies and other interiors not frequently wet, optimised for cleanability.

P3

WET AREAS

Showers, bathrooms, residential kitchens, toilet facilities, fresh-food areas and food courts.

P4

OUTSIDE

Exterior walkways, ramps and sloping driveways under 1:14, bars and serving areas, pool surrounds, boat decks.

P5

HEAVY DUTY

Commercial kitchens, loading docks undercover and steeper ramps.

Why two P3 ratings?

The P3 class is broad. Areas that frequently get wet need a solid P3, while stairs, living rooms and lobbies work best with a softer finish that cleans easier. Stellmann offers both: P3 for wet areas, P3 Soft for the rest.

DRY

The same tile, dry. Half of it is coated, and you can barely tell which half.

WET

The same tile with water poured over it. On the coated half (top) the water sits in beads. On the uncoated half (bottom) it turns into slippery glare.

One system, from primer to finished floor.

Stellmann Non-Slip Clear PRO

Dual-component, water-based, low-VOC polyurethane coating. Clear, satin sheen, UV-resistant, flexible and durable. Supplied with Stellmann Clear Primer to warrant adhesion. Applied with Stellmann PRO rollers (10, 25 or 36cm), or sprayed with a Graco HVLP 9.0 Pro, diluted with approx. 4.5% water by weight (7.5% for the P5 mix). The finish is satin either way.

DIY kits: 1.2, 5 and 15m²

Trades PRO bundles: 30 and 60m², in P3, P4 or P5

Certified installer packs: 165m², in P3 Soft, P3 or P4

P5: add Stellmann P5 particles to the P4 mixture

Prep & Maintenance Cleaner

Non-toxic, alkaline concentrate for pre-application and maintenance cleaning, in a 5L bottle.

Coating & Paint Remover

Powerful, non-dangerous stripper, free of methylene chloride. In 1L and 12L.

Stellmann PRO Rollers

The mandatory rollers for a warranted finish, in 10, 25 and 36cm.

ANZ Global Headquarters, Docklands

More than 4000m² upgraded across the landmark building: bathroom tiles, vinyl kitchen and canteen areas, bluestone and marble showers, and the loading dock ramp, at P3 Soft through P5. Now on an ongoing reapplication cycle.

Brisbane Busway Stations

Non-Slip Clear PRO P4 won the trial and now protects travellers on ceramic tiles, granite, concrete and vinyl across more than 15 busway stations.

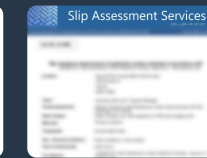

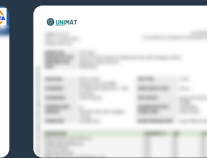

We have done this many times.

Some of Australia's biggest names trust our systems:

Independent slip tests. Passed with our systems.

Tested by independent labs after treatment. P5 is the highest Australian wet slip rating.

Independent post-treatment laboratory reports on file across transport, health, hospitality and commercial floors. Site details blurred for confidentiality. A slip test records what a surface measured on the day it was tested; these results were measured after treatment and do not predict any future test. Full reports available on request.
